Summary

Berlin-based Platform Engineer with 6 years of experience building scalable, secure cloud infrastructure on AWS and Kubernetes. Known for delivering measurable cost savings, driving secure AI adoption, leading incident response, and for making technical concepts accessible both to engineers through mentorship and to non-technical teams through internal training.

Work Experience

Senior Platform Engineer — Whereby Jun 2023 – Present

- Investigated and implemented AWS cost-saving measures achieving $57,567 in annual savings.
- Led company-wide rollout of Claude Code via AWS Bedrock, enabling AI-assisted engineering on customer-data workloads without onboarding a new subprocessor.
- Built AI governance in Terraform: SCP-enforced Bedrock budgets, usage-anomaly monitoring, and a default-deny MCP server allowlist with security review.
- Designed and implemented multi-region database architecture with disaster recovery, replication, and upgrade paths to meet data protection requirements.
- Architected a testing strategy for blue/green EKS deployment pipelines and set up service, business-level and Lambda alerting across the platform.

Platform Engineer — Scout24 Dec 2021 – Jun 2023

- Built systems for deploying applications within the Cloud Infrastructure team; developed custom Kubernetes controllers.
- Planned and executed a six-cluster Kubernetes upgrade with zero downtime.

Backend Engineer — Alteos Jan 2021 – Dec 2021

- Developed APIs and managed databases across authentication, finance-related services, and data processing using TypeScript and Golang on AWS/Kubernetes/PostgreSQL with solid CI/CD practices.

Volunteering

Python Instructor — ReDI School Sep 2024 – Present

- Volunteer instructor for Python Fundamentals, Project Management, and Data Analytics tracks.
- Provide 1:1 student support, advising on career growth and technical skills including coordinating with industry professionals to conduct mock interviews for the students to get real world interview experience.

Skills

Languages	TypeScript, Golang, Python, Bash, Ruby
Cloud/Infra	AWS, Terraform, Kubernetes, Helm, ArgoCD, Linux
Data/Workflow	Dagster, PostgreSQL, Redis, DBT, Metabase
DevEx/CI	GitHub Actions, Jenkins, build pipelines, artifact management
Observability	Datadog, Prometheus, Grafana, Opensearch, SLOs, on-call
AI Tooling	Claude Code, AWS Bedrock, MCP, agent guardrails (CLAUDE.md, skills, hooks)
